

**Best for Performance Horses that
Need Calories and Energy**

Free Style Performance™ (Trail Mix)

Daily Dose Equine® is always innovating!

Free Style Performance (Trail Mix) was developed to support the nutritional needs of hard keepers, especially those in moderate work. The base of this feed is a blend of timothy and alfalfa hay, chosen for its digestibility and forage-first philosophy. To this, Daily Dose Equine adds roasted barley, roasted oats, peas, sunflower, and flax—ingredients that offer both palatability and a variety of nutrients to help maintain healthy weight and energy.

Each serving is fortified with a complete vitamin and mineral mix, along with edible clay and sodium bicarbonate to help neutralize excess stomach acid. The fat source in Free Style Performance is canola oil, offering a 2:1 Omega-6 to Omega-3 fatty acid ratio for healthy inflammation response and coat condition.

Feed at a rate of 4 to 5 lbs. per 1100 lbs. of body weight per day for horses in moderate work. Always provide clean, fresh water and quality forage.

Free Style Performance is manufactured at a non-GMO, ionophore-free mill in Lebanon, PA.

WHY NON-GMO (genetically- modified) INGREDIENTS?

Daily Dose Equine® LLC sources non-GMO ingredients in all its feeds to eliminate herbicide contamination. GMOs were originally developed to increase crop yields through the application of herbicides such as RoundUp (glyphosate). In the United States,

This chemical is now present in breakfast cereal as well as in products for our pets and equine partners. Continuing research is exposing glyphosate as a cause of digestive issues based on its antibiotic action on good gut bacteria. As a chelator, glyphosate removes important minerals for the horse and interrupts hormonal communications within the body.
