

# Ulcers & Digestive Supplements

## GI Sponge™ 1

Described as a bouillon cube of natural elements that are biologically available in this natural clay colloid. This product has a physical attraction to bacteria, nitrate-nitrogen and ammonia. Montmorillonite Clay also acts as an effective buffer, assisting in normalizing the critical acid/alkaline balance while improving levels of digestive enzymes.

Available in 6lb containers. Dosage: Free Choice or 2 to 4oz per day

## GI Sponge™ 3

Similar in action to GI Sponge 1, this product includes Di-tri-octahedral smectite, green desert calcium, and micronized zeolite clay.

Available in 5.75 lb containers. Loading dose: 60cc 2x per day for an 1100lb horse, Maintenance Dose: 30cc 2x per day for an 1100lb horse

## GI Thrive™

Horses are grazing animals, designed to eat and digest small amounts of fibrous grasses throughout the day. But the modern performance horse needs more energy than grass can provide. Plus, intermittent feeding and other lifestyle factors can challenge GI health. **GI THRIVE™** used once a day allows a horse to function naturally *inside*, even during active training and competition. Based on whole foods that are non-GMO or organic, GI THRIVE neutralizes stomach acid. Ingredients such as papaya and oat flour soothe digestive tissues while prebiotics promote efficient hindgut fermentation.

Ingredients include oat fiber, sodium bicarbonate, non-GMO rice bran, papaya, Montmorillonite clay, cabbage, prebiotics, aloe, psyllium and pumpkin seeds.

Available in 4 or 10 lb containers. This product is dosed at 60cc/day.

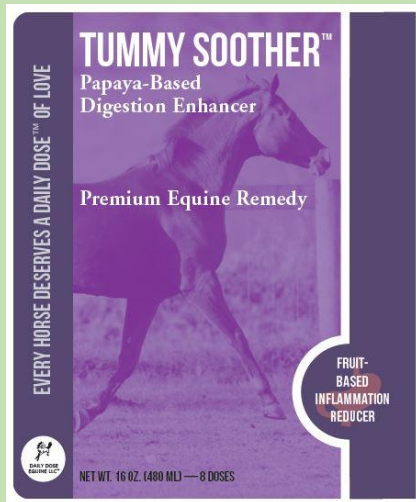

## Stomach Balance™

Stomach Balance is an herbal remedy for digestive issues and offers a low-carbohydrate alternative to the GI Thrive. Licorice works to resolve infections in the digestive tract while Slippery Elm, clay and bicarbonate combat acid reflux. Marshmallow Root and Milk Thistle soothe inflammation and irritation.

Ingredients include Organic Slippery Elm, Marshmallow Root, Milk Thistle, Licorice Root, Montmorillonite Clay and Bicarbonate of Soda. Available in 4, or 10 lb containers. This product is dosed at 60cc/day.

## Tummy Soother™

Tummy Soother is a dehydrated papaya product made for travel. It comes in a bottle so you just need to add water to reconstitute. Papaya aids digestion by increasing mucous secretion in the mouth, esophagus and stomach. In some cases, a horse that had been turning its nose up at food starts eating within moments of the administration of papaya. The horse's mouth waters, so it feels the urge to eat. It both gives damaged tissues a chance to heal, and helps prevent new horse stomach issues or EGUS. In horses moving vigorously (race horses, eventers, endurance horses) the esophageal mucous protection can help keep reflux from damaging the esophagus.

Available as a single pint size bottle or a pack of 6 pint size bottle. Dosage is 60CC/feeding.
